Symbols and conventions

- O In this document the following conventions are used at formatting to differentiate text elements.
- O The names of equipment pieces are written in BOLD. Example: **mipromex**

In this document the following terms and symbols are used for special program messages:

Emphasized symbols and notices and their meaning:

I	Mortal Danger: the non-observance can lead to injuries or death.	00	Step by step: Text enhanced/marked this way, contains detailed instructions and comments
	Caution: the non-observance can lead to equipment damages or loss of information.		Actions to be carried out by user.
i	<u>Information / Notice:</u> describes equipment characteristic features.		Read and follow instruction steps.
	A waiting time is required during which the equipment does recalibrate itself.	mipromex display	Compare with the mipromex display.
	Adjustment of the measuring electronic MTI (visualized by red and green LED's).		Plug in mains 230/115 V (24 V AC/DC).
③	Observe and control equipment display.	# =	Send equipment back to manufacturer.
A V	Button on mipromex front panel	<u> </u>	mipromex Error message on display with Time/Date
▲▼	Function: change value according to displayed character set	◆▶	Button on mipromex front panel
▲ ▼	Change line without store	◆ ▶	Function: select number or character
С	Button on mipromex front panel, Function: back	ok	Button on mipromex front panel, Functions: menu, select, next, store (press more than 2s)
"next step" in navigation bar	press ok b utton on mipromex . Press less than 2 seconds to advance to the next parameter	"store" in navigation bar	press ok b utton on mipromex . Press more than 2 s to store

1. Security and precautions

The following points must be considered at installation and setting up of microprocessor units 24 V AC/DC:

1.1. Installation

- The units are IP20 according to EN 60529 and must be protected against e.g. splash water or pollution exceeding the degree of pollution 2.
- The units must be installed outside the hazardous area.

 Maximum 7 units can be installed into a 19"-Rack. Multipoint connector type: F132 must only be equipped with dand z contacts. Solder connections are to be isolated with heat shrinkable sleeves (see chapter 7.2)
- Single units installed with Monorack Type: MRM 2 (see chapter 7.4)
 Housings or switch cabinets must be ventilated (dissipation of heat built-up)
- Hazardous area blue line to lead separately (cable channel or joined to loom of cables)
 Equipotential bond must be installed; Hazardous area protection
 Outside installations: a corresponding lightning protection of the probe supply cables is recommended.
- ☐ Installation instructions for impedance probes I must be observed

1.2. Setup

- ⇒ Verify wiring and power supply tension (chapter 7.2)
- ⇒ Perform probe and system specific parameterization in the menu (chapter 5)
- ➡ Check max. load of the opto-electronic coupling transistor outputs (NPN) according to datasheet (chapter 7.6)
- Adjustments under tension are only allowed to be carried out by manufacturer Handling by user is performed only via protected film keypad Repair of unit only by trained personnel with manufacturer certificate

1.3. Hazardous Area protection

Control devices with intrinsically safe output, approved for the connection of defined rod probes in the Ex zone according to SEV ATEX22.

The EU type examination certificate must be observed. Compliance with the "Special Conditions" contained therein is particularly important. Ex certification according to directive RL 2014/34/EU

Please note the following documents:

- *VDZ-SEV22-ATEX-ISO_Zertifkat-Doc.pdf* (currently valid certificates)
- *VDD-STM*** ... Technical probe data sheet with the specific (X) Ex-relevant layer thicknesses and information about use in which zone.

1.3.1. Following notices must be observed:

- 1. The microprocessor control unit **mipromex** as per EN <u>60079-0:2006</u> can only be used outside of the hazardous area.
- 2. The highest allowed ambient temperature is 60°C (also inside a protective housing)
- 3. The microprocessor unit **mipromex** is to install in a manner that at least the protection standard IP 20 as per Standard IEC 529 resp. EN 60529 is fulfilled. By corresponding mount into rack unit this condition is fulfilled.
- 4. At installation of the microprocessor control unit **mipromex** a minimum distance of 50mm must be created by insertion of a separation wall between the intrinsic safe and non intrinsic safe wiring circuit or the connecting parts must be insulated (i.e. with a heat-shrinkable sleeve). The input lines are secured to the rack or the monorack with a strain relief.
- 5. The intrinsic safe signal wiring circuits are safe galvanic separated from the remaining wiring circuits up to a peak value of 375 V of the nominal voltage

1.4. SIL Safety Integrity Level

The microprocessor unit mipromex is produced as per the SIL standards Norm IEC 61508/61511.

1.5. Cleaning of units

The microprocessor unit **mipromex** and the measuring electronic **MTI** built-in on the probe head are not allowed to be cleaned with water.

The cleaning of the front panel is to be done with a slightly damped, clean cloth. The printed circuit boards, to remove the dust, shall only be slightly blown-out with compressed air (low pressure 4 bar).

The bar probes must be cleaned with alcohol or a corresponding solvent.

Probes with stainless steel electrodes (SRK or SRM or probes made to measure powders/solids) are not allowed to be cleaned with water or liquids.

1.6. Maintenance

The data transmission of the microprocessor units remains stable, even over a long period of time. Therefore, a periodic adjustment or similar, is not necessary.

1.7. Warranty claims

Your measuring system had to undergo a precise final inspection at the factory. Interventions are only allowed to be carried out by a competent person. Warranty according to Aquasant Messtechnik AG warranty.

1.8. Waste disposal of electrical and mechanical components

The Waste Electrical and Electronic Equipment (WEEE) Directive, which came into force on 13 February 2003, has brought about a major change in the way we handle electrical and electronic equipment that is no longer used. The WEEE logo (see on left), either on the product itself or on the packaging, indicates that this product must not be disposed of with normal household waste. For more information regarding the disposal of waste electrical and electronic equipment and for recycling and collection points, please contact your relevant local authority or the business where you purchased the device.

4		2	2	2
5	2		1	1
6	2		2	1
7		2		
8	2 intern		1	1
9	1		1	1

One DC-converter, with potential separation, analog output toward power supply
Two DC-converter, additional potential separation, analog outputs toward each other

 X_7 0 = standard - software

1 = first expansion of a standard - software

 X_8 - = without

C = controller (device with control function) e.g. **MIL** 8110 **C** interfacial layer level controller

P = product compensation

S = Segment

Ex = with hazardous area protection according to ATEX II(2)G [Ex ia] IIC // II(2)D [Ex iaD]

Exd = with hazardous area protection according to ATEX II(2)GD [Ex d ia] IIC

NEx = without hazardous area protection on measuring print

2.2. Software Versions

2.2.1. Basic

The standard operating software is used for all basic hardware units. The basic functions are identical for all software versions; you can use them on all the units. Software versions are marked according to NAMUR EN53.

Example:

MAT 419*	V1.1x	1 measuring circuit with one analog output and one Relay limit value
MAT 411*/22	* V1.1x	2 measuring circuits with 1 analog outputs each (not potentially separated against each other)
		and 1 limit value output OC each. The second measuring circuit can be activated with an activation code subject to costs.
MAT 422*	V1.1x	2 measuring circuits with one analog output each and one limit value each*
MAT 424*	V1.1x	2 measuring circuits with one analog output each (potentially separated against each other) and one limit value each*
		(* no change in software except type code)

Within each software type, at cost, additional functions can be activated.

For each additional function a separate activation code is generated for each measuring circuit. The activation code is serial number depending.

Examples for additional functions:

Second measuring circuit for MAT 411*/422*

The simple menu navigation (language selectable) assures a fast and accurate operation. Input can be made via buttons and display of the device or via connection to a laptop or the process control system.

2.3. Basic functions

The **mipromex MAT** has one or two separated and independent measuring circuits. Depending on the device type, one or two measured signal processing can be activated.

The pulse signal transmitted by the measuring electronic MTI is transformed into an offset compensated and filtrated pulse value and converted into a 4 - 20 mA signal in function of the selected measuring span.

The output signal is displayed as pulses value, % value or as mA value.

The offset range can be set between 10 and 2000 pulses.

The measuring signal offset (zero point) can be picked up automatically and/or the stored value can be modified via the keypad buttons. The measuring span is product dependent determined and automatically stored and/or the stored value can also be modified manually via the keypad buttons.

The pulses signal is converted into a 0 – 100 %-value.

The 4 - 20 mA analog output can be spread via programmable start and end values.

Parameter input is menu-driven and device-type based. Inactive positions are hidden.

The parameters can be stored and reloaded.

For each measuring circuit, an opto-electronic coupler transistor output (OC) with Low and Hi function as well as an adjustable time delay for drop and activation is at disposal. Fault messages are visualized with time and date of the error.

2.4. Measuring circuit

One or two probes with the measuring electronic MTI in the connecting head are connected to the **mipromex MAT** using a shielded two core cable. Between field and control room an equipotential bond must be installed.

2.5. Function

A product surrounding or filling an Aquasant-mt impedance pipe or bar probe you varied the impedance in function of the dielectrical constant and/or conductivity characteristics of organic products or aqueous solutions as, well as the immersion depth of the active part of the bar probe .

The measured impedance sum signal is converted directly by the measuring electronic MTI into a normed signal and is transmitted as pulse packages to the analog transmitter **mipromex MAT**.

The measured values within the normed signal range are product specific and characteristic for the different products and changing in accordance with product mixtures or immersion depth - This product specific measured value correspond to a value in the range of 0 - 3700. The physical impedance measured value of a product is registered in digits, designed as pulses value.

In a measuring electronic range (e.g. MTI 100) the dielectrical value of 100 pF is converted into a range of 0-3500 pulses.

A modern and menu driven operation and calibration concept enables a time saving commissioning of the analog transmitter. The frontal key pad with function and graphic display assure a user friendly operation and reliable working.

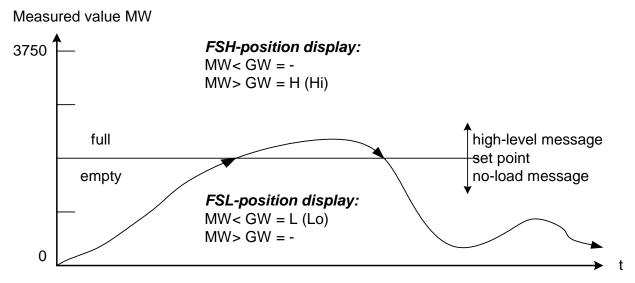

Use for foam and powder surveillance, recognition of water in petrochemical products or organic products in water or surveillance of surface oil layers with floater probes

2.1. Measured values processing

The safety level switch MLS is equipped with 2 different measured values processing modes: **stat** and **dyn**. The factory setting at delivery or after initialization is the **stat** (static) process mode.

PosNr.	settings	description
6.1.2	stat/dyn	Static measure processing mode
6.1.7	FSL/ FSH	Safety level (full) switch

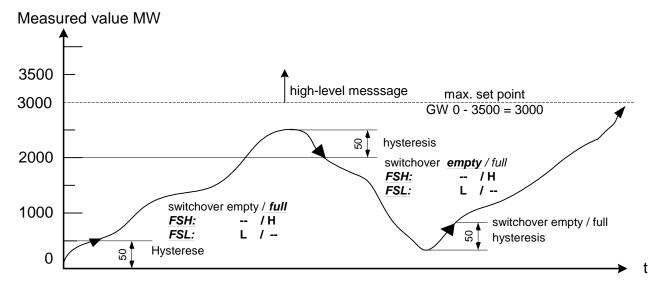

2.1.1. Static measure processing mode

Pic. 2 static measure processing mode

2.1.2. Dynamic measure processing mode

Nr.	settings	description
6.1.2.	stat/dyn	Dynamic measure processing mode
6.1.3.	3000 Imp	Max. limit value (as example below)
6.1.4.	50 Imp	Hysteresis (as example below)

6.1.6.	00.00 mm.ss	Relay Time delay, tension
6.1.7.	FSL/ <mark>FSH</mark>	Safety level (full) switch

Pic. 3 dynamic processing mode

3. Structure of data input (parameterization)

3.1. General

To select a menu point or to go forward/ "next" step in the menu, use the **OK** button.

The function of the **OK** button is shown in the inversed bar at the bottom of the display.

The position number of the actual menu item is displayed at bottom left.

To select the desired menu item use the \blacktriangle \blacktriangledown buttons. The selected menu item is shown inversed. To execute the shown function use the \bullet k button, to delete a value or go back to the previous menu, use the C button.

3.2. Key functions

Key	description	Messwert-Anzeige	in main menu	menu line	Data input
A	up	Advancing display	"next" menu item	1 step up	0 – 9 / A - Z
▼	down	next dysplai	"next" menu item	1 step down	0 - 9 / A - Z
>	right	-	no function	no function	input right
◀	left	-	no function	no function	input left
ОК	"next" / menu / select / store	(>2 s) Confirmation error	select	confirm	forward or (>2 s) store and forward
С	back	retour	back	back	back

Chart 2 Key functions

3.2.1. Input / changing of characters

Every parameter has its own input field.

The input and change of parameter values can be done using the **mipromex** menu or via PC-Software.

For several menu configuration text input is required. Text input is done the same way in all functions.

Input via buttons on the **mipromex** key pad is done as follows:

The first position, beginning on the left, is inverted. To change the character use the ▲ ▼ buttons.

To select the next position use the ◀ ▶ buttons.

With the **ok** button (press >2 sec) the new value is stored and the display changes to the next parameter. You can reactivate the old value using the **C** button. If no input is made during an adjustable amount of time, the display changes back to measured value.

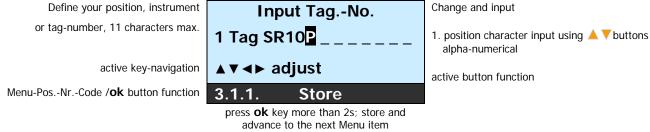

Chart 3 Display

3.2.2. Select language

The languages Deutsch/English/Français are available and selectable in the **mipromex** menu. A fourth language can be programmed. The parameter text field is loaded according to language code via PC-Software. Changes of the text can not be done using only the microprocessor unit **mipromex!**

3.3. **Graphic display**

The format of the display is as follows:

Every menu position, parameter and device unit can be set active or inactive (not visible) according to the function of the device. The display is also adjusted to the function of the device.

Information about storing or next

After pressing the **ok** button, the display changes to password

Password

The password protects the programming level of the **mipromex**. If you start up for the first time, the standard password is 0000 and is displayed. If you change the password (under point 1.3.) every user has to log-in using the new password!

Note: If you loose the new password, contact aquasant-mt to obtain an override password.

Key in your new password or accept the standard password selected digit is inverted

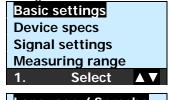

- 1. Key-in the numerical password using the extstyle extstyle
- 2. Press ok button more than 2 seconds

Display changes to the menu Parameters can be changed

4.1.1. [1.] Basic settings

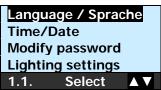

You can set the device specific parameters in the basic settings menu. Please note that you first have to activate the password before you can make any changes.

Main menu selected menu item is inverted

After pressing the **ok** button the display changes to the sub menu basic settings

Sub menu Selected sub menu item is inverted

After pressing the **ok** button the display changes to the sub menu Language / Sprache

Language/Sprache [1.1.]

Select the desired language. After you selected the language and stored your choice, the new language will be activated immediately. On the internet homepage www.aquasant-mt.com / Downloads, you can download an Excel-file. The three languages Deutsch, English and Français are listed. Replenish all text blocks in your language (max 16-characters), send it to us and we will be glad to implement your language.

selected menu item is inverted

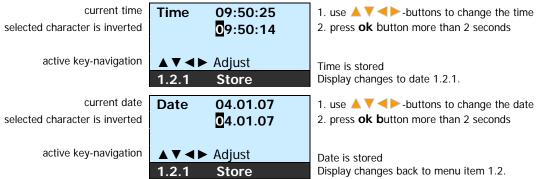

- 1. select language with the ▲ ▼-buttons
- 2. press ok button more than 2 seconds

The selected language is immediately activated Display changes back to menu item 1.1.

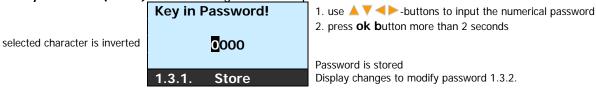

[1.2.] Time/Date

Correction of device time and date. The time is displayed in hours, minutes and seconds. Daylight saving time is not adjusted automatically! The date is displayed in day, month and year. The device time is used for the protocol logger.

[1.3.1.] Key-in and change password

The *standard password (0000)* can be changed. The old password has to be confirmed first.

[1.3.2.] Modify password

The standard password (0000) can be changed. The new password has not to be confirmed.

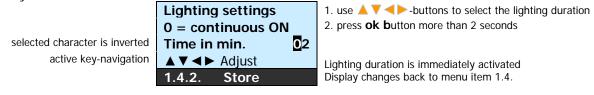

[1.4.1.] *Lighting*

The display lighting can be switched on or off. The duration of the lighting can be set in minute-steps; for continuously on choose time 00, under the menu point 1.4.2.!

[1.4.2.] Lighting settings

The display lighting can be switched on or off. The duration of the lighting can be set in minute-steps; for continuously on choose 00!

[1.5.] Contact

[1.6.] Factory settings

Under the *Factory settings* Menu Level, the programmed device parameters can also be stored, reloaded or deleted. All parameters are set back to factory settings at initialization of the device.

[1.6.1.] Store Parameter set

All keyed-in parameters are stored in the flash memory of the unit. The parameters can be reloaded afterwards.

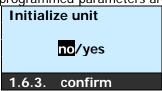

[1.6.2.] Load Parameter set

If parameters have been changed or deleted, the last flash stored parameter set can be reloaded into the RAM.

[1.6.3.] Initialize unit no/yes

If the device is initialized, all user-programmed parameters are deleted and set back to factory settings.

[1.7.] Activation code

With the activation code, several optional dutiable *software packages/functions* can be activated. You can obtain the activation code by ordering the optional packages/functions (e.g. *MK 220* Article-No.: 02.05.03.0019). The activation code is *depending on the serial-number* and can not be used for other devices.

[1.7.1.] Activation of/for 2nd measuring circuit

On the Hardware type **MAT 4110/220** with one active measuring circuit, the second measuring circuit can be activated. If the code is entered incorrectly the menu jumps back to menu item 1.7. The code can be entered again! Once the second measuring circuit is activated, it can not be deactivated. At start-up the new hardware type **MAT 4220** will be displayed.

use ▲▼ ◆►-buttons to input the alpha-numerical Code
 press ok button more than 2 seconds

Input is stored Display changes back to menu 1.

4.1.2. [2.] Device specs

In the device specs you will find specific information about the **mipromex**.

Main menu selected menu item is inverted

In the signal settings menu all signal related parameters can be set.

After pressing the **ok b**utton the display changes to the sub menu signal settings

[3.1.] Select measuring circuit 1 or 2

Select the active measuring circuit for the next steps.

selected menu item is inverted

Select meas. circuit

1/2

3.1. Select

After pressing the ${\bf ok}$ button the display changes to the menu of the selected measuring circuit (1). 3.1.1.

[3.1.1.] Input Pos. No.

You have the possibility to store a <u>Tag No. for the probe in the</u> **mipromex**. The field is alphanumerical.

define your positionor Tag-number, 11-characters max. selected character is inverted

use ▲ ▼ ◆ buttons to input the alpha-numerical position number

2. press ${f ok}$ ${f b}$ utton more than 2 seconds

Pos.-No. is stored Display changes to menu item 3.1.2.

[3.1.2.] Probe factor

The probe factor is a probe specific number which indicates the correlation to the standard probe (factor 1.00). If you replace the probe you will get a reproducible measurement with the same measured values. The probe factor has only to be changed when using a replacement probe. By changing the factor, you will get with the replacement probe, the same pulses value at 100 %

e. g. MeV old probe 2600 / 2955 MeV new probe = f 0.879

The probe factor has only to be changed when using a replacement probe selected character is inverted

use ▲▼ ✓ ►-buttons to define the probe factor
 press **ok b**utton more than 2 seconds

Probe factor is stored

Display changes to the next menu item 3.1.3. After changing the probe factor the zero point must be actualized and stored 3.1.3. $\,$

[3.1.3.] Zero point acceptance at push button (Offset) OK store

The probe electronic is calibrated in the factory to 60 ± 2 pulses. If the probe is installed, this value can be higher due to the environment. If the probe is installed; empty and dry, the zero point can be checked and/or manually corrected. Attention: switch-on the unit 30 minutes before the zero adjust. A measured value between 10 and 2000 pulses can be adjusted without performing an electronic calibration. *Attention; Probe must be dry and clean!*

MeV = normed measured value in pulses

actual stored zero point offset actual raw measured value, empty probe

3.1.7. Store

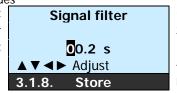

use ▲▼ ✓ ► -buttons to define the measuring span
 press **ok b**utton more than 2 seconds

The new measuring span is immediately activated Display changes to the next menu item 3.1.8.

[3.1.8.] Signal filter

With the free selectable filter time constant (max 30 seconds) you can attenuate the raw measuring signal. A way to center the displayed and power output values

Input the filter constant filter of the first order actual stored filter constant

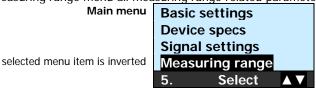

1. use **A V III**-buttons to define the signal filter time 2. press **ok b**utton more than 2 seconds

The new time is immediately activated Display changes back to menu 3.1.

4.1.4. [5.] Measuring range

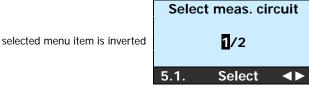

In the measuring range menu all measuring range related parameters can be set.

After pressing the **ok b**utton the display changes to the sub menu measuring range 5.1.

[5.1.] Select measuring circuit 1 or 2

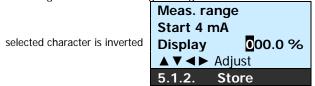

Select the active measuring circuit for the next steps.

After pressing the **ok b**utton the display changes to the selected measuring circuit menu (1). 5.1.2

[5.1.2.] Measuring range starting point

Set the start point of the selected measuring range (e.g. **20.0** – 60.0 %). By defining the start and the end point you can *spread* the mA signal and therefore get a higher resolution in this area.

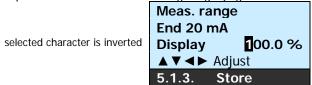

1. use A -buttons to define the start point 2. press **ok b**utton more than 2 seconds

The new spreading is immediately activated

Display changes to the next menu item 5.1.3.

[5.1.3.] Measuring range end point

Set the end point of the selected measuring range (e.g. 20.0 - 60.0 %)

use ▲▼
 buttons to define the end point

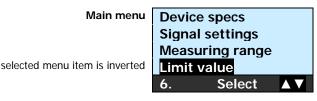

2. press **ok b**utton more than 2 seconds

The new spreading is immediately activated

Display changes back to menu 5.1.

4.1.5. [6.] Limit value

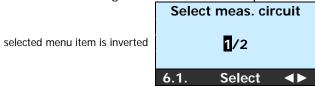

In the limit value menu all limit values related parameters can be set.

After pressing the **ok b**utton the display changes to the sub menu measuring ranges 6.1. select measuring circuit.

[6.1.] Select measuring circuit 1 or 2

Select the active measuring circuit for the next steps.

After pressing the **ok b**utton the display changes to the selected measuring circuit menu (1). 6.1.2

[6.1.1.] Select static or dynamic

With the static limit value you can:

- obtain a precise and reproducible limit value for a given measuring range corresponding to 100 %
- read a chosen limit value as a percentage and programme it as a limit value
- enter very small limit values, starting at 1.1 %, thanks to the high performance measuring circuit and the precise and reproducible processing of the measurement values

With the dynamic limit value you can:

- detect the limit value inside the length of the active measuring electrode independently of the product's properties

and its adherence to the measuring electrode

- only one dynamic limit value should be set for each measuring circuit.
- see diagram for the processing of the measurement value

Diagramm (look on Capitel 2.6)

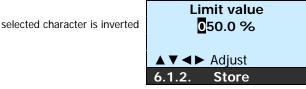

- 1 Use ▲ ▼ ◀ ▶ -buttons to define the function
- 2. Press ok button more than 2 seconds

After pressing the ${\bf ok}$ button, the display changes to the menu Enter limit value or max limit value and hysteresis

[6.1.2.] Limit value

With the static limit value you:

- get an exact and reproducible limit value for a defined measuring span corresponding to 100 %
- can display read a desired percentage at the desired limit value and program it/store it, as limit value
- can enter exact limit values starting at 1.1% thanks to the precise and reproducible measuring values.

use buttons to define the limit value
 press ok button more than 2 seconds

The selected limit value is immediately activated Display changes to the next menu item 6.1.4.

Or wen your select dyn...

[6.1.2.] max. Limit value

After entering Dynamic

- 1. Use ▲ ▼ ◀ ▶ -buttons to define the limit value
- 2. press ok button more than 2 seconds

The selected limit value is immediately activated Display changes to the next menu item 6.1.4.

[6.1.3.] Hysteresis

After entering Dynamic

selected character is inverted

- 1. Use ▲▼ ◀►-buttons to define the hysterese
- 2. Press ok button more than 2 seconds

After pressing the **ok**-button display changes to the next menu item 6.1.4.

[6.1.4.] Time, drop down delay, 1

The relay- or opto-electronic coupler- transistor- output can be activated with a drop down time delay. Input of the time delay drop, in 1 second steps from 0 - 30 minutes.

- 1. use ▲▼◀▶-buttons to define the time delay off, drop
- 2. press **ok b**utton more than 2 seconds

The selected time delay is immediately activated Display changes to the next menu item 6.1.5.

[6.1.5.] Time, on delay, 1

The relay- or opto-electronic coupler- transistor- output can be activated with an on/raise time delay. Input of the time delay, of raise, in 1 second-steps from 0 - 30 minutes.

selected character is inverted

1. use $\triangle \vee \triangleleft \triangleright$ -buttons to define the time delay on, raise

2. press **ok b**utton more than 2 seconds

The selected time delay is immediately activated Display changes to the next menu item 6.1.6.

[6.1.6.] **FSL/FSH Position**

Define the security settings of the Relay- or opto-electronic-coupler- transistor- outputs, ...

Active position		Measured value	Display	opto-electronic coupler

4.1.6. [7.] Test functions

To test the functions at commissioning, a programmable mA output is available.

After pressing the **ok b**utton the display changes to the sub menu test functions 7.1. select measuring circuit

Select measuring circuit 1 or 2

Select the active measuring circuit for the next steps.

Select meas. circuit selected menu item is inverted 1/2 Select

After pressing the **ok b**utton the display changes to the selected measuring circuit menu (1). 7.1.1

[7.1.1.] Simulation of mA- output (in 0.1 mA steps, starting at 0.5 mA)

With this function the active current output (burden 750 Ω) can be tested.

The current output can be increased in 0.1 steps starting at 0.5 mA and ending at max. 22.0 mA.

selected character is inverted

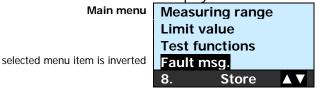

1. use \bigwedge \bigvee -buttons to define the current output

2. press **ok b**utton more than 2 seconds

Current output is immediately activated Display changes back to 7.1.

4.1.7. [8.] Programmable mA output

All mipromex microprocessor units are equipped with a diagnostic system, which makes fault-finding easier and facilitates quicker correction in case of malfunction occurrence. The error levels can be set in 0.1 mA-steps between 0.5 - 4.0 and 20.0 - 22.0 mA. Error messages are set at factory to automatically acknowledge the fault. The fault-type is displayed with time and date. By pressing > 2 seconds the ok button, the display changes back to the measured value. The error is displayed without measured value ---.- and an arrow up ★ or down ♥.

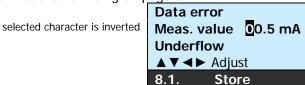

After pressing the **ok b**utton the display changes to the sub menu fault messages 8.1.

Data error measuring value underflow MeV <0010 [8.1.]

The data transmission of the measured value, between measuring electronic MTI and the control unit mipromex is faulty. The control unit **mipromex** is unable to process the measured data.

Error level 1 see fault finding on page 32

 use ▲ ▼ ◀ ► -buttons to define the current output 2. press ok button more than 2 seconds

Current output is immediately activated Display changes to the next menu item 8.2.

[8.2.] Data error measuring value overflow MeV > 3750

The measured value of the measuring electronic MTI is higher than the allowed range of pulses. The control unit mipromex is unable to process the measured data. Error level 2 see fault finding on page 32

 use ▲ ▼ ◀ ► -buttons to define the current output 2. press ok button more than 2 seconds

Current output is immediately activated Display changes to the next menu item 8.3.

[8.3.] **Technical Error**

The control unit **mipromex** generates a periodic checksum test. If it is faulty, an error message is displayed. Error level 3 see fault finding on page 32

1. use A V I buttons to define the current output 2. press ok button more than 2 seconds

Current output is immediately activated Display changes back to menu 8.

4.1.1. [12.] Calculation parameters

Measuring range Limit value **Test functions** selected menu item is inverted Calcu.-parameters 12. Select

After pressing the **ok b**utton the display changes to the sub menu 12.1. select measuring circuit

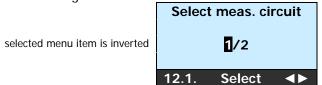

Select measuring circuit 1 or 2 (MLS 1200/1270) **Γ12.1.1**

With the drift compensation small measurement modifications like temperature drift are compensated for by HF wire or probes. ± 1-3 impulses per minute correspond to normal drift compensation. With the drift compensation the measurement has left constantly if the drift is smaller than the drift gradient. This means the measurement corrects itself the max. drift in impulses is fixed in the drift memory within a minute (adjusting drift time 60 s). The sum of the individual drift compensations becomes e.g. 30 (impulses) to change the measurement more greatly than 30 impulses begin itself into function of the drift. At a zero comparison [3.1.3.] the drift loft is put on 0000. Around min. 40 impulses, the zero comparison must always be GREATER than Max Driftspeicher. The measurement otherwise sinks at a negative drift under the zero. Consequence is: Technical disturbance measurement underrun!

At the measuring of at times slow modifications like filling level measuring the drift compensation must get prepared for 0 Imp, i.e. turned off.

Caution: With the drift compensation no probe pollutions can be compensated for.

Select the measuring circle for the further action.

After pressing the **ok** button, display changes to the menu for the measuring circuit selected (1). 12.1.1.

[12.1.1.] Drift memory

selected menu item is inverted

1. use ▲ ▼ ◀ ▶-buttons to define max. drift

6.1.4	Time, drop down delay, 1	00.02		

Chart 9 Commissioning of foam detection

5.3. Electronic calibration MTI, basic equalization

An electronic calibration has only to be done at following occurrences:

- ☑ Probes without reference electrode, flexible- or flat-probes where the *measured value* inside the *empty* vessel is smaller than 10 or bigger than 200
- ☑ After exchange of the measuring electronic MTI, or of the coax cable, or of the probe, or after repair of the probe
- ☑ If the zero adjust is not possible: displayed measured value >2000 or <10

Tip:

Adjust the measuring electronic MTI between 60 and 80 pulses

This allows the biggest possible measuring span of up to max. 3750 pulses.

Soiled or uncleaned probes should not be adjusted with an MTI calibration.

Ô	
or	

Probe dry and clean, built in the vessel

Go to the menu point 3.1.3.

Calibration of MTI as follows: Using a screwdriver size No. 1, fine adjust to switch point of the LED from red to green (red will flicker). Display between 60 and 80

The 0-point has been stored at the system test. If the probe is built in, dry and empty the 0-point can be checked and corrected.

Menu position Number-Code

6. **Fault finding**

All mipromex -microprocessor units are equipped with a diagnostic system, which makes fault finding easier and facilitates quicker correction in case of malfunction occurrence.

6.1. After power on

Technical error; All oder Nv Init from Flash oder low Battery 7.1.1.

The error message can have different origin.

1. RAM memory check has failed

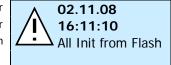

Date of error Time of error Error description

1. press ok button more than 2 seconds, the error is confirmed and the display changes back to last active menu point

2. Flash memory check has failed

Date of error Time of error Error description

1. press **ok b**utton more than 2 seconds, the error is confirmed and the display changes back to last active menu point

3. Battery is discharged and has to be exchanged

Date of error Time of error Error description

1. press ok button more than 2 seconds, the error is confirmed and the display changes back to last active menu point

Switch OFF and then switch ON the unit. If error reoccurs then:

Send unit back for repair! $\equiv 7$

6.2. **During operation**

6.2.1. Data error

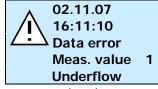

7.1.1. Technical error; Measured value 1 underflow

The error message can have different origin.

Date of error Time of error

Error description

Measuring circuit 1 or 2

1. press ok button more than 2 seconds, the error is confirmed and the display changes back to last active menu point

The mA output falls to the value programmed under menu point 8.3!

Description of 1st meas. circuit position Description of 1st meas. value

> Non display of meas. value Error display

ok button-functions / active keys

Limit value low alarm is reached

use the A V buttons to scroll within display mode

Description of the outputs Description of 1. and 2, meas. value Display of actual value of current outputs

Analog outputs 00.50 mA 1 2 **11.20** mA ok button-functions / active keys Menu

Press **Ok** to change to menu

use the \wedge volume buttons to scroll within display mode

1. Short circuit or circuit break. Change connection wires on clamp 1 / 2 of probe electronic.

Check connections of measuring electronic MTI

- 2. Hazardous area output microprocessor unit mipromex or measuring electronic MTI defective
 - ⇒ Send unit back for repair! \equiv .

The electronic insert MTI is plugged in the blue protection housing. Loosen the two outer M4-screws and remove the electronic insert MTI laterally towards the cable gland.

LED's on measuring electronic MTI are ON

3. Range monitoring did respond, measured value <10

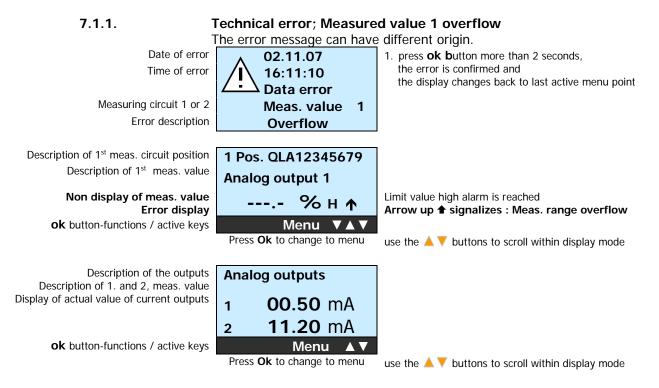

Check with 0-point-function at menu item 5.3., perform a new zero adjust

- 4. Coax cable or probe defective (circuit break)
 - ⇒ Send coax cable and probe back for repair! #=

Calibration of MTI was possible, microprocessor unit mipromex showing fault or after power cut showing measured value underflow (no measure):

- 5. Hazardous area data input of **mipromex** defective;
 - ⇒ Send mipromex unit back for repair! \equiv

ſ

LEDs on MTI measuring electronic are ON

- 6. Range control active, measured value >3750
 - ⇒ Scheck with 0-point function under Menu 5.3, perform new basic calibration
 - ⇒ Probe not covered (empty), coax cable or probe defective (coax plug wet)
 - ⇒ Fault occurs only when probe covered (full): Impedance in function of product too high:
- Send probe back for repair! \(\frac{\pi}{\pi}\) \(\frac{\pi}{\pi}\)

6.2.2. Display error

Faulty or no display on the LCD display

1. Restart the program after 5 seconds of mains interruption.

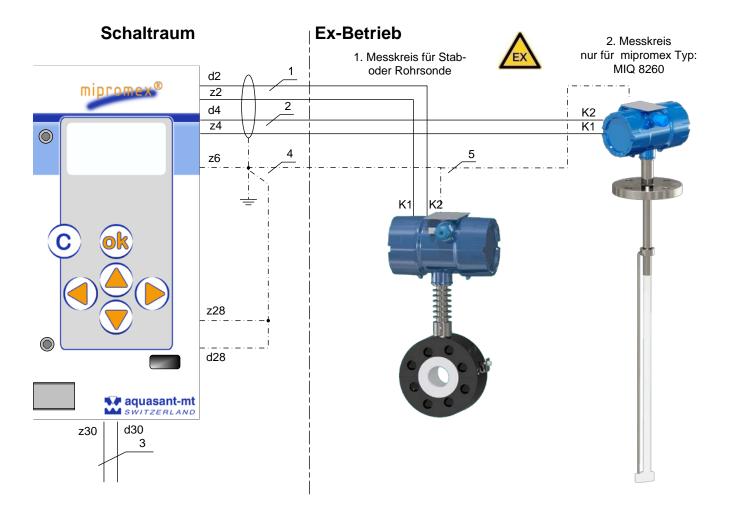

6.2.3. Radio equipment

Radio/wireless equipment should not be operated in the immediate vicinity of the microprocessor unit **mipromex**, of an open MTI measuring electronic or of the bar probe (measurements can be affected)

Minimum distance 1 to 2 m

7. Wiring diagram

7.1. Measuring electronic/probe with fix connection

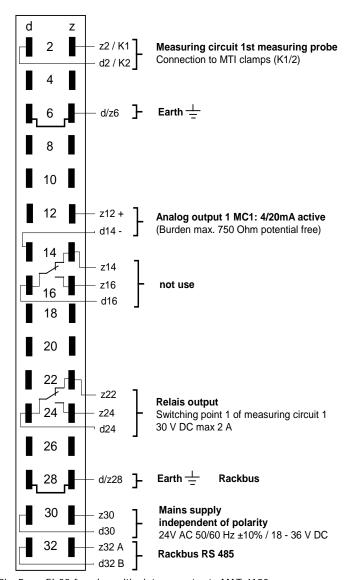

Pic. 4 Wiring diagram

- 1. 2 x 0.75 mm² shielded (both sides earthed in switch room and probe head)
- 2. MTI housing and probe are connected to the (factory/plant) equipment earths
- 3. Mains 24 V AC 50/60 Hz /DC ±10 % control voltage, polarity independent, without inductive load
- 4. Equipotential bond
 An equipotential bond must be fitted between the control room earth and the equipment earth
 (condition of hazardous area protection and for accurate data transmission)

7.2. Connections to female multipoint connector with 32 poles, type: MAT 419*

Microprocessor units with one measuring circuit input Connections to female multipoint connector FI 32

ELECTRICAL DATA

Euro plug-in card pin assignment 24 V-Version

Error message programmable in 0.1 mA-steps; 0.5 – 3.9 / 20.1 – 22 mA

7.4. Earthing of microprocessor units and probes

Equipotential bond and correct earthing for the hazardous area protection and against disturbances of the data transmission

8. Technical Data

8.1. mipromex Analog transmitter type: MAT 419x

Construction

19"-plug in module, with aluminum-steel housing; IP 20

Assembly

19"-Rack type MR 7; 3 HE (Europ.sizes)

Monorack type MRM2; plastic housing for DIN-rail- or wall mounting. Front plate fitting with Bopla housing. Compact or table top housing

Purpose

- analog transmitter with intrinsically safe supply for one measuring electronic MTI xx. Transformation of a digital measuring signal into an analog signal with measuring range spread
- analog output 4 20 mA
- menu driven, multi language unit
- hazardous area (Ex) supply for one measuring electronic MTI xx
- shielded 19" plug in module
- one open collector outputs NPN

Operation/Display

Film keypad-front plate with graphical LCD-display, backlit, 6 buttons for data and parameter input

Data saving during power cuts

Battery buffer max. 10 years. Parameter storage into flash at battery failure

Dimensions

Height 3 HE; Width 12 TE

Front plate: Height x width 128 x 61 mm

Plug in module: Height x width x depth 100 x 60 x 160 mm

7 units can be inserted on a 19"-rack

Weight

690 g

Mains supply

24 VAC 50/60 Hz $\pm 10\%$ / 24 VDC Range 18 – 36 VDC independent of polarity

Switch on current

momentary (1ms) approx. 1A

Power input t

ca. 3.4 VA (I = 140 mA)

Fuses

8.5 x 8.5 mm miniature fuse MST 400 mA

Hazardous area supply and signal transmission

[Ex ia] IIC Pulse modulated supply signal open circuit voltage max. 18.9 V; typically 17 V short circuit current max. 49 mA; typically 40 mA

[Ex d ia], Pulse modulated supply signal open circuit voltage max. U \leq 19.3 V; typ. 17 V short circuit current max. I \leq 75 mA; typ. 70 mA

Signal transmission

1 measuring circuit, pulse modulated supply signal

Signal line short circuit

power input max. MAT 4110: 160 mA

Ambient temperature

0 °C ... 45 °C

Storage temperature

 $-20~^{\circ}\text{C}$...+45 $^{\circ}\text{C}$, ideally 20 $^{\circ}\text{C}$

Measurement range

0 – 3700 pulses

Data display

MeV 0 - 3700

Switching hysteresis

1 pulse = 0.028 pF for the 100 pF measuring range

Connection

32 pole FI connector, coding facility

Relaysoutput

1 relay per measuring point wih a changeover contact for the limit value. Example: min./max. Deviation min. or max. selectable safety value. Switching voltage 30 Vdc /2 A, I/O=2kV, -40 to 85°C

Analog output

one active 4 – 20 mA output, max.working resistance/burden 750 Ω , not for hazardous area, with potential separation, tech. fault 0.5 – 4 / 20 - 22 mA adjustable

Interface

RS 232 / RS 485

Monitoring

Self-monitoring detection system for: defective probe; short circuit/interruption signal supply to hazardous area (cable break security); measurement range; main power interruption **mipromex** -error messages
